Hello!

This is a test letter, written using «brev.layout» and «brev.cls» Note that the send-to address fits C65 and C5 window envelopes. Fold along one of the folding lines, depending on what envelope size you use.

The date in yy-mm-dd format will be formatted according to the document language. Leave it blank, and you get today's date. For a free-form date, use the «date» paragraph type instead of «date (yyyy-mm-dd)».

As a minimum, you need to use send-to-address, opening and closing paragraph types, or the letter won't print at all. Also note that brev.cls only supports the languages english, norsk, nynorsk, danish and swedish, other languages fail to produce output.

Regards,

My name
